

PLANT MANAGER

Blue Planet System Corporation is a cleantech start-up company located in Los Gatos, California, that is developing technology, products and services related to economically sustainable carbon capture and mineralization, whereby carbon dioxide (CO₂) gas from point source emitters is permanently sequestered as solid carbonate in building materials for beneficial reuse, specifically as aggregate for concrete.

Blue Planet is seeking a Plant Manager. The position will be located at our San Francisco Bay Aggregates (SFBA) facility in Pittsburg, California and will report to the VP of Engineering.

Responsibilities and Duties

- The Plant Manager will oversee day-to-day operations at the SFBA site ensuring that all activities are done safely, in compliance with company policy, and according to work orders provided by R&D personnel.
- The Plant Manager will be a "hands-on" team player who will operate the process, construct new systems, and maintain equipment as baseline activities.
- The Plant Manager will lead a small team of Operations Engineers that will assist the Plant Manager in developing procedures and operating the SFBA pilot facilities accordingly.
- The Plant Manager will interface with applicable regulatory agencies to ensure that all activities comply with local laws.
- The Plant Manager will be responsible for critical site activities including scheduling, participation in design and safety reviews, and infrastructure development.
- The Plant Manager will be responsible for regular communications with Blue Planet leadership.

Qualifications

- A minimum of 5 years of experience in plant operations including at least three years in a leadership role (plant manager or similar supervisory role) is required.
- A high school diploma is required. A college degree or equivalent relevant training, such as military training or operations-specific training, is highly desirable.
- Good communication skills, an optimistic outlook, and the ability to manage in an environment of shifting needs are critical.
- The ability to perform physical labor is required. Basic maintenance skills, such as welding, basic motor repair, or small scale electrical, are highly desirable.

Blue Planet Systems Corporation is at the cutting edge of the future of the green building industry, and this is an exciting opportunity for an eager engineer to be part of a company striving to make a difference in the world by sequestering billions of tons of CO₂ per year in the built environment.

Blue Planet Systems Corporation offers a full benefits package commensurate with experience. Position is available immediately. Interested candidates please email a pdf of your résumé to jobs@blueplanet-ltd.com and list "Plant Manager" in the subject line.
